Contact: Shan Chockalingam

Micro Focus Records & Content Manager promotion

(Pricing valid until 19th October 2018)

Product Description - License	License Cost	Maintenance Cost
<p>20 Inquiry User Seats (\$215 per license) Consumes the information that is added to MF Content Manager by other users and searches and view records, but does not contribute themselves. An example is an employee/contractor accessing policy documents and work instructions.</p>	\$4,300	\$860
<p>20 Knowledge Worker Seats (\$445 per license) Uses MF Content Manager as part of their day-to-day business processes as a document management and filing system. These Named Users will take part in workflows, add and edit documents and search for information.</p>	\$8,900	\$1,780

**The more seats you purchase the greater the discounts.
All other requests will be considered and discounted accordingly
All prices are exclusive of GST**

Product Description – Additional Modules	Module Cost	Maintenance Cost
<p>ControlPoint 10 TB ControlPoint is an intricate component of Micro Focus’s Information Management offering, designed to bring unmanaged content under control and address the needs for data access, consolidation, privacy, analytics, discovery, risk and value. It works both independent of Content Manager, and as a tightly integrated module of Content Manager.</p>		

The evolution of Content Manager from TRIM is a significant aspect of the solution's roadmap. TRIM may have started with Records Keeping (therefore compliance and governance) as the primary area of concern for IM professionals, but over the last 20+ years it has evolved along the lines of not only market trends and customer needs for innovation, but as a strategic component for management of all types of content, and providing itself as a base for a comprehensive platform, managing data from unstructured repositories as well as databases. ControlPoint is a necessary component of that data management platform for all unstructured repositories, providing visibility into legacy data, facilitating transparent management, in-place management, discovery of personal and potential data privacy content, discovery of intellectual property, a 360 degree view of both the content and the metadata around data, the ability to auto categorise or classify content, build relationships of similar content across multiple repositories to enhance data value, and become a strategic system for risk, privacy and data management policies. ControlPoint not only indexes and analyses and classifies data, it also comes with an in-built policy execution engine to archive, move, capture and delete data based on the business requirements.

Please note: 5 TB & 15 TB are also available in this promotion. Please enquire.

Product Description – IK CM Value Add Products

**IK CM Revisions Analyser
(Version 3.0 – Added features)**

Managing changes to documents is easy with your Micro Focus CM solution and happens automatically. Changes occur regularly and managing the revisions history can become a complicated task over time. Do I need to keep revisions? How many revisions do I keep? These are all valid questions that you should ask. Revisions are kept in the Micro Focus CM Document Store and can take up a reasonable amount of disk space. If you could minimise

**\$3900
(Up to 500 User
Sites)**

\$980

the amount of revisions in your solution you might save a considerable amount of disk space making it cheaper and easier to manage.

The IK Revisions Analyser has been specifically developed with this in mind. To give you full visibility of your entire document revisions count and telling you how much disk space these revisions consume you need the IK Revisions Analyser. From a single location you can analyse revisions and, if desired, delete them from the solution.

New features in 3.0:

- New search Filter – Record Type
- Save search functionality
- Bulk Delete
- Export to CSV and TXT file formats
- Switch Dataset in RA
- Support from RM 8.3 to CM 9.3
- Enhanced Performance

IK CM Audit Log Analyser

Investing time analysing an audit trail is often the least favourite task. It can be very complex and time-consuming. However, it may be the only way to find out whether certain activities have occurred in your Micro Focus CM solution. How do you find out what may have been deleted? How do you find out who made the last change? How can you proof that documents haven't been changed?

The IK Audit Log Analyser is designed specifically to analyse and process your audit log files and display them in a readable form. The system administrator can then search the entries in the log files and find exactly what is required. With an intuitive User Interface, the IK

**\$3900

Sites)**

\$980

Audit Log Analyser can be used to run Analytical reports that can easily be exported and distributed.

IK CM Document Store Analyser

Similar to the accumulation of revisions in your Document Stores you could also discover that there are a large number of “orphaned” documents left behind in your Document Store with no reference to any record in your system. Have you Deleted a large amount of records? Have you Removed a large amount of Revisions? Have you Disposed of a large amount of records? These are all valid tasks (apart from the Delete) but are you certain that the Documents have actually been removed from your system?

The IK Document Store Analyser helps you find these documents that you thought had been deleted but in fact are still on your File System. Once analysed you can then remove these documents from the Document store freeing up considerable disk space making it easier and cheaper to manage.
